Adaptive Agriculture Solutions Inc. provides grain drying solutions. We have developed sensor-based systems that can be equipped with the grain bin and helps farmers in managing bins via mobile app. The sensor systems operate a supplemental heater reducing natural air drying and cooling grains to optimal storage temperatures after each drying event. The platform allows users to get alert notifications via mobile devices.

Our IoT products are a plug-and-play solution for your grain bin. All devices read in-bin grain cables for grain temperature and moisture monitoring.

Different devices are used for In-Bin Drying & Hydrating and are able to automate the fan and heater with our modular control boxes.
