We back everything up with up to a 5 year warranty and our famous USA based customer service. We are fully insured for product liability and most of our products are UL and DLC listed. No one does LED Lighting better!

### **LED Lights From the Experts**

Save money by replacing old fixtures with high efficiency LED lights. Many of our lights can pay for themselves in just a few years. LED lights are the best choice for lighting because its instant on, no mercury and no harmful UV radiation. It is also the most efficient with up to 180 lumens per watt. Whether its an LED wall LED, outdoor Solar LED light or some commercial high bay and panel lights, we have you covered. Everything you need to go LED with Ease! Amazing LED Fixtures or check out our selection of LED Retrofit kits and LED Light Bulbs where you can keep your old fixture and still go high efficiency LED.

### **Why are LED Lights Better?**

- An LED Light is Super Energy Efficient. We are still think in watts to determine how much light we need, but we should be thinking in Lumens. Lumens is the actual light output. Old incandescent lights averaged about 8-10 lumens to the watt. So a 100 watt bulb had about 800-1000 lumens. CFLs got to about 60 lumens to the watts and LED Light Bulbs can get over 100 lumens to the watt. So you can replace that same 100 watt bulb with just 10-14 watts. Some of our larger fixtures are now getting over 150 lumens to the watt. Save up to 80% on energy costs. Often pay for the new LEDs in just a few years!
  - 2. No Mercury. CFLs require mercury to work. If that bulb breaks or leaks, that mercury can be toxic. LEDs require no mercury and have no toxic substances.
-

- 
- 3. No UV. CFLs , High Pressure Sodium and Metal halide emit large amounts of harmful ultraviolet rays. Not only are those rays known to cause cancer, but they also fade and wear everything in the room. Harmful to the eyes
  - 4. Long life. Typical bulbs only last a few years. Today's LED bulbs are achieving 25+ years or more. Our LED High Bay Lights have 100,000 hour lifespan. That's 35 years at 8 hours a day.
  - 5. Money savings. Since you can use less energy and replace bulbs less often, the LED light bulbs or LED Light fixtures you use often pay for themselves. Yup, free lights after just 5-7 years on average.
  - 6. Cleaner Light. Newer LED Lights are achieving CRI levels above 85 and holding a very consistent color. This avoids the flickering and zebra patterns you often get from older lights. Now bright lights are pleasing to look at.
