Solar Panel Installations

It has never been easier or cheaper to generate your own electricity from solar panels, a reliable and clean way to use solar power. Use our calculator below. You may be surprised at how little it can cost to benefit financially and contribute to the environment with considerable carbon emission savings.

Company Profile

UK Solar Power Panels Ltd. Founded in 2010 we are proud to have been in the Solar Generation business for as long as we have. This is a record seldom met by others in the industry. This means we are here to support you now and into the future.

It usually takes a single day to install the panels and link them to your electricity supply. The whole system is tested to ensure it is operating at peak efficiency and we offer a full 10 year installation warranty as standard. You can call on us at any time for advice or to assess the operation of your solar PV system. We are not a sales company or quotation agency; we offer energy generation solutions and we are proud of our contribution to renewable energy in the UK.

Comprehensive survey to assess the potential of your home An efficient design to maximise your electricity output No obligation and hassle free quotation based on the government's Standard Assessment Procedure (SAP) providing accurate performance & financial estimates Government approved under the Micro-generation Certification Scheme (MCS) All business conducted according to the Renewable Energy Consumer Code RECC consumer code. View existing installations and talk to previous customers

What We Offer

We do a complete survey and design efficient systems that maximise the available space, however complicated the structure.

We work on a variety of homes and commercial properties and sites, whether they are traditional slate or tiled roofs, steel framed barns or pre fabricated concrete structures.

25 year manufacturer's warranty on all solar panels 10 year insurance backed installation warranty All guarantees and warranties fully transferable

The Electrical Team

Our electricians have managed large housing projects and worked on military aircraft and are used to working with precision to tight time deadlines. They are all Part P qualified and deliver installations well beyond the required standards.

The Roofing Team

Our main roofers have over 20 years personal experience working on a variety of buildings including projects for grade 1 listed buildings. They have completed installations that other companies have turned down as too difficult.

TO WHOM IT MAY CONCERN - REF: UK SOLAR POWER PANEL

In 2015 the Chichester Boys Club embarked on a major rebuild of the main roof (45meters long) and the rooms under the roof at the east and west end of the building. The main reason for the replacement of the roof was that the old roof was 50 years old and made out of corrugated asbestos cement, which was leaking on a regular basis and costing the club in maintenance bills.

We approached a number of contractors for the roof replacement and also, because the roof was south facing, a number of contractors for a solar panel system. One of the contractors (UK Solar Power Panels) quoted for both elements of the work. The company had been recommended to us by a previous customer who we knew. We were very impressed by our first impressions of the company due to their professionalism, communications, and reliability.

From the start, they did what they said they would do. For instance their quotes, which were very detailed and easy to comprehend, were prompt and they answered any queries we had. It also made sense to us to have both pieces of work done by the same contractor. Our building is difficult to access for contractors doing work, being in the centre of a busy Roman city

with its narrow streets and lack of parking.

We found their reliability continued on day one, with scaffolding and materials arriving on time. Despite the problems caused by our location and our clients coming and going, some of which suffer from dementia and mild mental health problems, UK Solar Power Panels, worked their way through these problems intelligently with good communications with us.

We found the staff cheerful, cooperative, and very polite. The safety of our clients were paramount, as most of them do not like change and new people, but the staff dealt with this in a friendly and caring way. At the end of the project, we were so pleased with the work that we asked UK Solar Power Panels to look into a battery system to compliment the solar panel system. Once again we obtained a very competitive quote from them and went ahead with the system which means we are now 80% off grid. This has given us savings on heating and lighting, plus a government feed in tariff which has so far earned us over £4,000.

The after care has also been excellent. They answered any of our queries and questions regarding the system promptly. It is a company I would highly recommend to any potential customer.

Ray Richardson,
Hon. Sec.
Chichester Boys Club

We use quality engineered materials and top brand name monocrystalline panels that carry a 25 year warranty. Our home installation prices start at £3,900 for a fully fitted system including VAT. We are MCS certified, RECC accredited and NAPIT members and able to certify all building registrations. Your deposit is fully insured so if your installation is not completed for ANY reason, you get a full refund. We offer free, ongoing support and will complete all the forms you need to claim government incentives. We do not use any underhand sales tactics, we let our quality and prices speak for themselves. We calculate the amount of power your solar panel installation will produce using government regulated standard Assessment Procedures (SAP calculations). We have full liability and guarantee insurance cover. An average installation will save over 1 tonne (1,000 Kg) of carbon emissions each year The annual cumulative installed capacity of solar photo voltaic in the United Kingdom (UK) from 2009 to 2020 (in Megawatts) was 13,563 MW By 2020 there had been 1,060,471 registered installations in UK.
